PG SERIES

Efficient Drilling Power for High Productivity

Features and Benefits

Energy Efficient η -V Profile Aired

The ELGi PG series comes with a unique rotary screw air end that saves energy. The η -V rotor profiles are designed to maximise energy efficiency and hence minimises energy expenses.

Intelligent Control System

The new and innovative Auto high drill system powered by ELGi's patented Intelligent Control System (ICS) ensures optimal drilling speed and pressure while guaranteeing exceptional drilling performance irrespective of strata, depth, and water yield conditions. The Intelligent Control System (ICS) also ensures faster penetration, better fuel efficiency, and lower cost per foot resulting in maximum savings and profit for the customer.

Improved Air Intake System

The weld-free air intake system with 3-stage air filtration, ensures clean air entering the compressor with minimal pressure drop. This ensures reliable operation and enhanced life of the compressor parts.

Increased Operational Life

The compressor is ideal for operations in dusty environments. The two-stage filtration system keeps dust out of the compressor and engine.

Durability and Protection Against Corrosion

The PG series compressor canopy is made of powder-coated industrial-grade steel. The cool-box design allows cool air to enter the rear of the compressor (in closed-door operations) and wash over internal components, to keep the internal temperature low and extend component life.

Fuel-Efficient Compressors

The ELGi PG series portable diesel compressors are powered by reliable engines known globally and designed to provide the best fuel economy and low emissions in their class.

Air Supply Matched with Demand

Fuel consumption and operating costs are reduced thanks to the 0-100% stepless capacity control. The butterfly valve is regulated by air consumption demand to optimise compressor performance.

Effective Cooling

Aluminium oil coolers are used for better heat dissipation.

User-Friendly Control Panel

The intuitive control panel integrates all main instrument controls and monitoring systems. The operational condition of the system may be determined via the use of simple-to-use instruments and digital readouts. During abnormal circumstances, the digital panel displays warning and shutdown signals.

Easy Access for Maintenance and Service

Operators may swiftly and easily reach regular maintenance components, reducing service time. Service doors make it simple to access air filters and valves. The cam lock/swing door configuration on the service doors enables simple and fatigue-free regular maintenance.
